Amendments to the Specification:

Replace the paragraph at page 14, lines 7-11, with the following amended paragraph:

In the preferred embodiment a Telnet system is used to wirelessly access data center 62. Telnet emulates a client/server model and requires that the client run a dedicated software to access data center 62. A Telnet protocol provides for commands entered on the programmer to be executed as if entered directly on the remote data center. The Telnet scheme envisioned for use with the present invention includes various operating systems including UNIX, Macintosh, and all versions of Windows.
